No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | SIDSI/gcgdata/geneseq/geneseqn-embl/Na1980.DAT:*

The present invention relates to the isolation of human polynucleotide sequences that are differentially expressed during foam cell differentiation. The polynucleotide sequences of the invention or a composition comprising these polynucleotides are useful as a high throughput method for detecting altered expression of one or more polynucleotides in a sample. The polynucleotides can be used in the diagnosis of disorders associated with foam cell development such as atheroscierosis, cerebral stroke, and cardiovascular disorders such as coronary artery disease. The polynucleotide sequences can also be used as POR primars and probes. The polynucleotide sequences can also be used useful in gene therapy. Assign the invention are also polynucleotide sequences of the invention are also polynucleotide sequences of the invention which are differentially

Isolated polypeptide for treating, preventing and/or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

Example 2; SEQ ID NO 3534; 781pp + Sequence Listing; English.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)aponists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune gastrointestinal tract, liver, lung, or urogenital; (b) immune control and thyroiditis, diabetes mellitus, crohn's disease, continued thyroiditis, diabetes mellitus, cohn's disease, contitue sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and it, infectious diseases such as viral, bacterial, fungal and Note: The sequence data for this patent did not form part of parasitic infections.

    ö
quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AASS4197-AASS454 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 28083; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic

XX
AX54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
Cx amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
c activity, and can be used in gene therapy and vaccine production. (I)
Cx cample, they may be used in gene therapy and vaccine production. (I)
Cx cample, they may be used to tract disorders associated with decreased
Cx cample, they may be used to tract disorders associated with decreased
Cx cample, they may be used to tract disorders associated with decreased
Cx cample, they may be used to produce the secreted (I) by inserting
Cx supplement the patients own production of (I). Additionally. (I)
Cx supplement the patients own production of (I). Additionally. (I)
Cx supplement the patients own production of (I). Additionally. (I)
Cx supplement the patients own production of (I). Additionally. (I)
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx cancers and cancer metastases of haematopoietic antigen genomic
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx concers and cancer metastases of haematopoietic antigen genomic
Cx represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1) polynucleotides may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, addingnose and treat immune/lammatopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. and artifatory and can be used in game therapy and vaccine production. (I) activity, and can be used in gene therapy and vaccine production. (I) cartifaty, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynuclectides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynuclectides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic artifact general promits cancers muther present invention. AAKS4942 to AAKS4950 and AAMS2169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, actuating cancers and

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or amelicating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful. The nucleic acids, proteins, antibodies and (ant)agonists are useful. In the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; of himmune disorders e.g. Addison's disease, allergies, autoimmune themolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative of the additional and paragine infectious diseases such as myocardial ischaemias; child protein and parasitic infectious diseases such as viral, bacterial, fungal material and parasitic infections diseases and parasitic fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5330 GITITITITITITITITITITITITITITITITITICAGACGGACTCITGCICICICACCCAGGCI 5271

Sequence 1, Application US/09089195

Sequence 1, Application US/09089195

Patent No. 6087489

GENERAL INFORMATION:

APPLICANT: Dean, Nicholas M.

TITLE OF INVENTION: ANTISENSE OLIGONUCLEOTIDE MODULATION

TITLE OF INVENTION: OF HUMAN THYMIDYLATE SYNTHASE EXPRESSION

NUMBER OF SEQUENCES: 28

CORRESPONDENCE ADDRESSS:

ADDRESSEE: Law Offices of Jane Massey Licata

STREET: 66 East Main Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 : Seno,T.

Nuclectide sequence of a functional cDNA
Nuclectin human thymidylate synthase

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Composition useful for diagnosis of conditions, disorders or diseases associated with atherosclerosis, comprises several polynucleotides that

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain recombinant production of (II). The configuration recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating the polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and and contraction of mutations and the produce other types of data and products dependent on DNA and and and an order the contract of the produce other types of data and products dependent on DNA and and an order the polyperide and produce other types of data and products dependent on DNA and and an order the polyperide sequences. ABS4654 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    printed

                                                            This invention describes novel antisense oligonucleotides targeted to sequences in the 3' end of thymidylate synthase (TS) mRNA. Such oligonucleotides are cytostatic on their own when administered to human tumour cell lines, and also enhance the toxicity of anticancer drugs such as Tomudex administered to those cells. In addition, antisense oligonucleotides targeted to 5' sequences induce TS gene transcription. The antisense oligonucleotides are used in a method for the
                                                                                                                                                                                                                                                                                                                                                                        The antisense oligonucleotides are also used in the production of a medicant for the treatment of cancer, either separately or in conjunction with a therapeutic agent such as thymidylate synthase (TS) inhibitors
                                                                                                                                                                                                                                                                                                                                treatment of cancer (or a method for providing antiproliferative effect)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            agents (e.g. antioestrogens, (anti)progestogens, antiandrogens, testosterone inhibitors, anti-invasion agents, growth factor inhibitors, etc.); antiproliferative/antineoplastic agents (e.g. antimetabolites,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1031 tggaaatggctgtttaggggtgctttcaaaggagctCgaaggatattgtcagtctttaggg 1090

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the nucleotide sequence of Varicella virus, Oka strain. The specification describes a method for the quality control of an attenuated pox vaccine, characterised in that the DNA sequence of specific parts of the viral genome in a sample is determined and proved to be conserved rather than mutated in comparison with the same parts of a reference viral genome. The method is useful for quality control of vaccines for use in the prevention of poxvirus
                                                                                                                                                                                                                                                                                                                                                                                                                              Method for checking absence of mutation at specific positions of varicella virus genome for quality control of attenuated live varicella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18442 cggcgaacttcagtacttaaaacaagtggatgatattttaaggtatggagttcggaaacg 18501

RESULT 10

the Kaposi's sarcoma-associated herpes virus (KSHY), KSHY is also known as human herpes virus (KSHY), KSHY is also known as human herpes virus 8 (HHV8). This sequence contains the DNAs of the invention which encode KSHY polypeptides selected from: (a) viral contains the DNAs of the invention which encode KSHY polypeptides selected from: (a) viral macrophage inflammatory protein (MIP) II; (b) viral interleukin-6 (IL-6); (c) viral IRP I; (d) complement-binding protein; glycoproteins B, M or Li, (d) capsid protein IV encoded by ORF65; and (e) immediate early protein encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded by It, and antibodies (Ab) specific for the proteins are useful for detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body filuds or tissue samples. HHV8 infections can be treated with antisense or triplex forming molecules or agents that bind specifically to the protein. Ab may be used for prophylaxis or treatment of HHV8 infection, while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHV8 may be implicated in many other lymphoproliferative diseases such as lymphomas, leukaemia, other lymphoproliferative diseases such as lymphomas, leukaemia, cother lymphoteid for drug screening. HHV8 derived peptides can be inhibited with methotrexate. These can also be used to determine can be inhibited with methotrexate These can also be used to determine the immune status of a patient infected with HIV. HHV8 derived protein certification frammatoid arthritis. This sequence is stated as containing for the c sequence represents the long unique region and terminal repeat of open reading frames

13

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO ed nucleic acid detection reagent for detecting 1000 or more Drosophila and for elucidating cell signalling and cell-cell 20423 GCTGACGGTGAGCTTTCCTGTCAGCTGTATCAGAGGTCGGGAGACATGGGTTTGGGAGTT 20364 20183 TCTGTTTCTTCCATGGAAGAGTTTACACCTGATGATTTTAGACTGGTGGACTACTGCCCG 20124 capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of 20303 AGACCCGGGGGGTTTATTCACACGTTGGGAGATGCCCACATCTACAAAACGCATATAGAG 20244 The invention relates to an isolated nucleic acid detection reagent insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA 20243 CCACTACGGCTGCAGCTGACGCGCACTCCACGTCCCTTTCCGCGCCTGGAGATACTCCGG 955 aaagttgagaaaattgatgacttcaaagctgaagacttcagattgaagggtacaatccg cettteaacategecagetacgecetgeteacgtacatgattgegeacateacgggeetg 835 aagccaggtgactttatacacactttgggagatgcacatatttacctgaatcacatcgag 895 ccactgaaaattcagcttcagcgagaacccagacctttcccaaagctcaggattcttcga Drosophila melanogaster expressed polynucleotide SEQ ID NO 11762. developmental biology; cell signalling; insecticide; Claim 1; SEQ ID NO 11762; 21pp + Sequence Listing; English. Sequences AAAI/12-AV319 represent 470 chars encounty process. Sequences AAAI/12-AV319 represent 470 chars encount process. The invention also specifically discloses 8 human colon tumour proteins antigen presenting cells (APCs, preferably dendritic cells) expressing cantigen presenting cells (APCs, preferably dendritic cells) expressing such polypeptides may be used in vaccines that target tumour cells, cancer 1-cells specific for the polypeptide expressed by the APC are used to remove tumour cells, thereby inhibiting the development of fractions thereof. The sample or the isolated T-cells specific for the polypeptide cancer development. Code and/or CPS polypeptide can then be used to inhibit cancer development. Code and/or codes the proliferation of specific T-cells from be polypeptides or nucleic acid of the invention, or an APC expressing such a polypeptide or nucleic acid encoding the polypeptides and antibodies and then administrated back to the patient to inhibit cancer cancer cells are present. Such diagnostic methods may also be used to attend mour protein of the invention, and therefore to determine whether cancer cells are present. Such diagnostic methods may also be used to monitor the progression of a cancer by repeating the processes at time intervals, and comparing the current result to preventious results. The intervals.
New colon tumor polypeptides used to inhibit the development of cancer, especially colon cancer, and for diagnosing and monitoring the progression of the cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1187 aggatgttgccactggcaaatgtaactgtgccagttctttccataataaaaggctttgag 1246

was primed with a Notrolly (dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies. Context: Feng Liang Life Technologies. Context: Feng Liang Life Technologies.
